

PennDOT Open Data Portal Crash Data Dictionary and Field Constraints Tables

pennsylvania
DEPARTMENT OF TRANSPORTATION

The Public Crash Data files consist of data obtained from Police Crash Report data submitted to PennDOT by investigating police agencies, driver reported data from the AA600 Driver's Accident Report form, and calculated fields kept in the Crash Data Analysis and Retrieval Tool (CDART) database. Data that is protected due to containing Personally Identifiable Information, or that could be used to infer information about persons involved in a crash are not included in the public dataset.

The annual data extract is kept as a series of Microsoft Excel CSV files and are organized as 8 distinct data tables as follows:

CRASH – Data that is relevant to the crash from crash reports, and calculated summary fields are contained in this table. The Crash Record Number (CRN) is used to identify unique crash cases. This number is created by the crash reporting system as each new crash case is created. Not all crashes are included in the final consolidated list of reportable crashes. Incomplete, duplicated, and non-reportable crashes are excluded from the annual data extract.

FLAG – This table contains fields that identify a crash by category. For each category, the field will contain a 0 if the crash cases does not meet the criteria for the flag and a 1 if it does meet the criteria. Each field can be used for data selection or for counts of crashes that meet certain criteria. The CRN is used as the key for this table and has a one to one relationship to the CRASH table.

VEHICLE – This table defines a unique Motor Vehicle or Non-Motorist Unit involved in the crash. It contains information regarding the motor vehicle or non-motorist and some flags that identify the unit as meeting certain criteria. The CRN and Unit Number (UNIT_NUM) fields identify a unique unit within the crash and has a one to many relationship with the CRASH table. All reportable crashes must have at least 1 UNIT and must have a motor vehicle in transit (which includes hit and run motor vehicles).

CYCLE – This table contains VEHICLE information for Motorcycles. The CRN and UNIT_NUM define the unit that corresponds to the vehicle record. There is a one to one relationship between the VEHICLE table and the CYCLE table. If the VEHICLE record does not have a Vehicle Type (VEH_TYPE) of "2", then no CYCLE table record should exist for that VEHICLE record.

COMMERCIAL - This table contains VEHICLE information for commercial vehicles. The CRN and UNIT_NUM define the unit that corresponds to the vehicle record. There is a one to one relationship between the VEHICLE table and the COMMERCIAL table. If the VEHICLE record does not have a Commercial Vehicle (COMM_VEH) of "Y", then no COMMERCIAL table record should exist for that VEHICLE record.

TRAILER - This table contains VEHICLE information for Trailing Units. The CRN, UNIT_NUM and define the unit that corresponds to the vehicle record. There is a one to one relationship between the VEHICLE table and the COMMERCIAL table. If the VEHICLE record does not have a Commercial Vehicle (COMM_VEH) of "Y", then no COMMERCIAL table record should exist for that VEHICLE record. There can be as many as 3 Trailer records for one VEHICLE.
